
Mystery: What Happened to Kendrick Johnson's Organs?

There may be no mystery to solve, but the case reminded me of the 2008 change in Georgia's organ donor law that passed with little or no publicity then and now. Questions about this case:

Q. What happened to Kendrick Johnson's internal organs?

The GBI said they were put in the body after the autopsy and were therein when it went to a funeral home.

Q. Is it customary to use newspaper to fill body cavities left by organ removal?

Ordinarily, more appropriate substances are used to fill cavities, but it's not illegal to use newspapers.

Q. When were the newspapers found in Kendrick Johnson's body?

After exhumation, in a second autopsy a private expert found newspapers stuffed in the body and skull.

On January 14th, Valdosta's WTXL reported the death of Kendrick Johnson, a 17-year-old high school athlete whose body was found January 11th at Lowndes High School. County officials said he got stuck in a mat at the school's old gym and accidentally suffocated to death. A GBI autopsy found no death-causing injury, but officials promised to perform additional tests.

On October 10, 2013 the *Atlanta Journal-Constitution* reported findings of a private pathologist the Johnsons hired to perform another autopsy, made possible by an exhumation order. After his independent autopsy, forensic expert Dr. William Anderson reported on August 15th that the cause of death was a fatal blunt force trauma to the right neck and soft tissue near the carotid artery. The blow appeared to be non-accidental and "consistent with inflicted injury." WXIA added, "Dr. Anderson said when he opened Johnson's body, it was stuffed full of newspapers."

As of October 9th, the Lowndes High School had not released the video of Johnson's last moments at school. However, CNN obtained a 15-minute-video and nearly 700 photographs taken by sheriff's investigators in Lowndes County. Kendrick's parents asked the Justice Department to get involved, but they declined. U.S. Attorney Michael Moore in Macon has monitored the case but has not indicated what he will do. The Johnsons are preparing a lawsuit requesting a coroner's inquest, hoping to change Kendrick's manner of death from accidental to homicide on his death certificate, to pave the way for reopening a criminal investigation.

Since July 1, 2008, you are a "Presumptive Donor" if you don't leave a "Refusal Document"

In 1994 H.B. 1547 passed to provide drivers' licenses at a discount for applicants who agreed to become organ donors. Twelve years later that OPT-IN plan was quietly changed to OPT-OUT.

In 2008 S.B. 405 made every dead person a "presumptive donor," unless the decedent left a written refusal document or a two-witness verbal refusal statement to prohibit organ harvesting.

Conclusion. Georgia's originally required personal consent to become an organ donor was reversed in 2008 with the passage of S.B. 405 which went into effect July 1, 2008. That's when all drivers became "presumptive donors" if they do not leave a "refusal document" or two adult witnesses to vouch for their verbal refusal. If no refusal document is left or no two witnesses can verify the decedent's refusal to donate organs, any of ten entities may allow harvesting.

The ninth entity is "any person having the authority to dispose of the decedent's body," e.g., funeral homes and crematoriums. S.B. 405 of 2008 is available at 404 656-5040.

On September 22, 2013, a transgender girl was crowned homecoming queen at Marina High School in Huntington Beach, California, just over a month after Governor Jerry Brown signed a transgender bill for public schools. In 2009, students at William & Mary, a public university in Virginia, elected a transgender student as homecoming queen.

Strategies of Confusion Cultivate Transgenderism

“It’s barbaric! At some point in childhood, many children role play as the opposite sex, but it is a social, not a medical issue. Treating these children with hormones does considerable harm and it compounds their confusion. Trying to delay puberty or change someone’s gender is a rejection of the lawfulness of nature.”

Dr. Paul McHugh, Distinguished Service Professor of Psychiatry, Johns Hopkins University

California. Effective January 1, 2014, transgender students will be authorized to choose which restroom and locker room they want to use and whether to play on a boys’ or girls’ sports team. Such considerations were provided in August when Governor Jerry Brown signed AB 1266 that gives special legal rights to transgender students K – 12. AB 1266 *does not* require students to prove they have a gender-identity issue. Rather, school administrators must rely on students’ opinions about their sexual identity.

California is the *first state to pass a transgender-specific law* requiring school compliance, but several *Florida cities* have done so, as well. However, Massachusetts and Connecticut have *statewide policies* granting transgender students freedom to choose which public facility to use, such as bath rooms and locker rooms. Does the law include teachers, administrators and staff?

Lawsuits are expected when transgender students displace straight students on sports teams. Also, travelers, beware! Protecting your privacy from transvestites could get you fined \$5,000.

On May 19, 2008 *Fox News* reported the opening, at Boston Children’s Hospital, of a pediatric clinic where transgender children receive (a) counseling, (b) drugs that delay puberty and pave the way for future sex-change surgery, and (c) hormone therapy to alter natural development.

In June 2007 Senator Tom Coburn released a 115-page report on the complete mismanagement of taxpayer money by the Center for Disease Control. Particularly rankling were funds spent on a *transgender beauty pageant* (p. 45); \$45 million for conferences, some *featuring prostitutes*, protests, and beach parties (pgs. 48-60); and syphilis prevention *featuring a porn star* (p. 44).

Georgia and elsewhere. Educational programs that are accredited by the National Association for the Education of Young Children (NAEYC) require the teaching of attitudinal values rooted in humanist doctrine, though humanism is a religion. So, beginning in preschool, children are exposed to anti-God situation ethics void of absolutes. Result: the 300 U.S. offices of NAEYC are contributing to early sexual confusion. Since 1989, NAEYC has required the use of its *Anti-Bias Curriculum, Tools for Empowering Young Children* in its certified kindergartens/daycares/preschools, where toddlers as young as age two are taught to accept/affirm all variant gender identities, as well as “blended families” consisting of two mommies or two daddies.

Cross-Play. The *Anti-Bias Curriculum* for age two and up is rife with gender-challenging, gender-blurring, transgender-affirming strategies for NAEYC certified daycare, preschool and kindergarten. Boys and girls are *not allowed* to consistently play with “stereotypical” toys of either sex. On specifically scheduled play-dates boys *must* play with dolls and girls *must* play with trucks, until *all of the boys and girls choose non-stereotypical toys* without prompting.

ACTION – Has NAEYC accredited your child’s daycare/preschool/kindergarten? Investigate the curricula.

A-Morality Pushing the Envelope

300 leading “LGBT and allied” scholars and activists call for the recognition of multiple partner relationships.

– “Beyond Same-Sex Marriage,” a Manifesto

“Marital breakdown harms society as a whole. A Brookings Institution study found that \$229 billion in welfare expenditures between 1970 and 1996 can be attributed to the breakdown of the marriage culture and the resulting exacerbation of social ills: teen pregnancy, poverty, crime, drug abuse, and health problems. A 2008 study found that divorce and unwed childbearing cost taxpayers \$112 billion each year and Utah State University scholar David Schramm has estimated that divorce alone costs federal, state, and local governments \$33 billion each year.”

– “The Social Cost of Abandoning the Meaning of Marriage,” Ryan T. Anderson, The Heritage Foundation, Sept. 9, 2013

It was March when a CNN Special asked, “Gay marriage, then group marriage?” under the subject of “Redefining Marriage.” While activists insist they, simply, want same-sex marriage, they, actually, want to extend that goal to unimagined depths. The following list includes some of the new words coined to describe those objectives.

CAUTION! Don’t be taken in by these new words.

They dangerously undermine public understanding of marriage and its value to society.

Polyamory. Group sexual partnerships *among* unlimited members of same-sex and opposite sex individuals

Example. The liberal online journal *Salon* in August 2013 posted a woman’s account of her shared life with a husband, boyfriend, and daughter. The headline of the story is, “My Two Husbands,” followed by this subtitle: “Everyone wants to know how my polyamorous family works. You’d be surprised how normal we really are.” [*When did adultery become OK?*]

Georgia. H.B. 1380 would have legalized polyamory in Georgia, but *it did not pass.* Former member of the Georgia House of Representatives Cynthia McKinney, later a representative in the U.S. Congress, introduced H.B. 1380 during her 1989-1990 term in the Georgia House. Her bill would have legalized sodomy or solicitation of sodomy *among consenting adults* [opposite-sex and same-sex]. Note that the words, “among consenting adults,” do *not* specify the number of participants and do *not* restrict their sexual identity.

Throuple. Recognition of romantic threesomes that move beyond a two-person couple to a three-person arrangement, explained as follows: [*Has group-fornication become fashionable?*]

A *New York Magazine* article in 2012 described a specific “throuple” this way:

“Their throuplehood is more or less a permanent domestic arrangement. The three men work together, raise dogs together, sleep together, miss one another, collect art together, travel together, bring each other glasses of water, and, in general, exemplify a modern, adult relationship.” [*Who deemed group-fornication an example of modern adult relationships?*]

Wedlease. A term borrowed from real estate, means a marriage contract for a specific period of time, at the end of which involved parties may renew the wedlease or walk away. There seems to be no limitation on the number of participants or the sex of those signing the same lease.

[*Children can’t be leased, so who is responsible for offspring produced as a result of the lease?*]

Monogamish. Sexual relationship allowing sexual infidelity if participants are honest about it
[*In or out of marriage, confessing may ease consciences, but can’t rectify wrong doing.*]

Gordon County School Pilots Microchip Tracking

In April the Gordon County school system became the first to launch StudentConnect (sic) in Georgia – a pilot program of RFID embedded badges worn by students and read by sensors installed on four district school buses. The brief program was scheduled to end May 23rd.

StudentConnect, offspring of East Coast Diversified Corporation, provides wireless technology that communicates between GPS and RFID technology. StudentConnect is free-of-cost to school systems that pilot it for use on their school buses and/or inside the school.

GPS and UHF RFID “interrogators” provide real-time notification within five minutes to parents and school officials for students that (a) fail to get on the school bus, (b) enter or exit the bus at the wrong stop, (c) experience anomalies during transit or (d) skip class. However, officials in Gordon County said they are interested in transportation, not in-school monitoring.

Invasion of privacy? Two civil liberties groups, Electronic Privacy Information Center (EPIC) and the ACLU, worry that parent and student privacy may be infringed. EPIC’s administrative law council explained, “The problem with RFID tags is that they can be read from a distance by malefactors, including stalkers. We don’t think enough parents are aware that the chips can be read at a distance. Kids could take the badges off. They could leave them with a friend, or in a classroom. Parents might not be aware that anything is wrong until it’s too late.”

A concerned ACLU of Georgia staff attorney said, “It’s not fail-safe...It can condition school administrators to ... sit back and assume the technology is doing the work for them.”

Did you know? In Georgia only prisoners are protected from mandatory or secret implants!

The March 25, 2009 passage of Representative Len Walker’s H.B. 306 is the ONLY legislation allowed to pass in Georgia to prohibit involuntary microchip implants in humans. However, the prohibition applies only to criminals. It states: “Under no circumstances shall electronic pretrial release and monitoring equipment be introduced internally or beneath the skin of any person.”

Did you know? The Georgia public is NOT protected from mandatory or secret implants.

On March 28, 2006 the Georgia House passed Representative Ed Setzler’s H.R. 1558, that created a five-member Biological Privacy Study Committee to research emerging technology, its relationship to privacy and the “right of the people to be secure in their persons.”

Microchip Bills That Died in the Georgia General Assembly

H.B. 276, the Biometric Information Protection Act, died in committee in 2007. Introduced by Representative Ed Setzler it prohibited (a) implants of biometric sensors or person-locating tracking devices without personal consent and (b) inappropriate use of genetic data.

H.B. 38, prefiled December 30, 2008, died in committee. H.B. 38, prefiled by Representative Ed Setzler, stated that no one could be required to have a microchip implanted and required payment of damages and free removal of microchips implanted without the recipient’s consent.

S.B. 235 passed the Senate in 2009, but died in a House committee. It was introduced by Senator Chip Pearson, so (a) no person could be required to have a microchip implanted and (b) anyone requiring such would be guilty of a misdemeanor and (c) could be sued for damages.

ACTION – Ask your senator and representative to introduce/support a bill to prohibit involuntary implantation.
